Bounty Creation

Reward

Set the payout for full completion of the bounty, as specified by the scope

Amount

e.g. \$650

652.27 DAI ⓘ

This value includes estimated gas fees

Please note that due to the fluctuating cost of gas fees on the Ethereum network that the amount of deposited DAI will exceed the value of the reward. Any excess DAI will be returned to your wallet once the transaction is confirmed.

Difficulty

Select a difficulty rating for Contributors to filter by. Estimations should reflect the time and skill level required to adequately complete an LCA bounty

MODERATE

Click 'Deposit Funds' to open MetaMask and send the reward to a secure smart contract

Building a better world through crowdsourced LCA

Create LCA Bounties

A Life Cycle Assessment quantifies the environmental impact of a product or service. Organizations use LCAs to inform decisions regarding sustainability and implementation of sustainable policies.

The current system to create LCAs is heavily centralized. Both organizations and engineers can benefit greatly from a direct system to draft and verify life cycle assessments. Currently, engineers must work through a third party such as a government or corporation in order to complete these reports. By removing the middle men, assessments can be done significantly faster at lower cost.
